ENDOCRINOLOGY

ENDOCRINOLOGY DEALS WITH HORMONE DISEASES AND THESE ARE :-

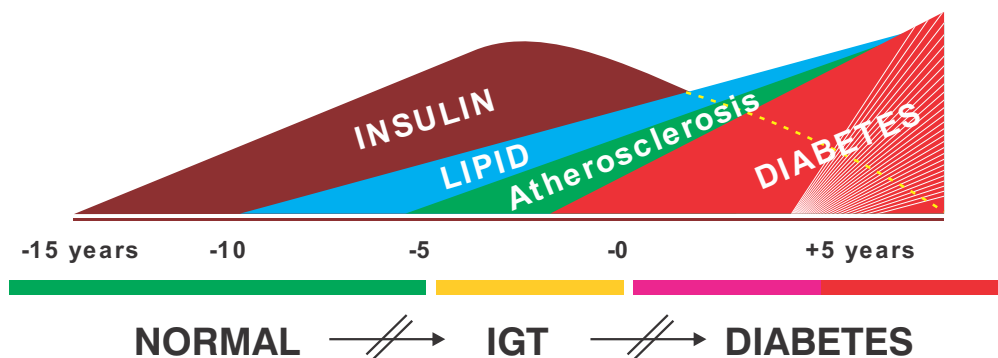

CHOLESTEROL & CALCIUM & VIT. D DISEASES

DIABETES

Diabetes is a symptom free disease at onset. It is preceded by a pre-diabetic stage which is called Impaired Glucose Tolerance (IGT) which latest for 5-10 years before progressing to frank diabetes. It is during this pre-diabetic stage (IGT) that long term complications of diabetes start appearing. Hence, it is important to identify this high risk group at earliest and start treatment to prevent / delay, the onset of diabetes.

Natural History of Diabetes

At onset of diabetes 80% insulin producing cells are dead

● Aim of treating diabetes is to

1. Prevent organ damage in patients
2. Preserve / regenerate pancreas
3. Prevent diabetes in offspring (children)

The complications of diabetes

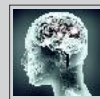

Diabetes is the commonest cause of **blindness** in working age group

Heart Attacks are three times and **Paralysis**/Stroke is 3 to 5 times more common among diabetics.

Diabetic Foot

Sexual Problems are much more common in male diabetics

It is also the commonest cause of **Kidney failure.**

● Treatment consists of

1. Life style modification
2. Drugs
3. Monitoring blood sugar etc.

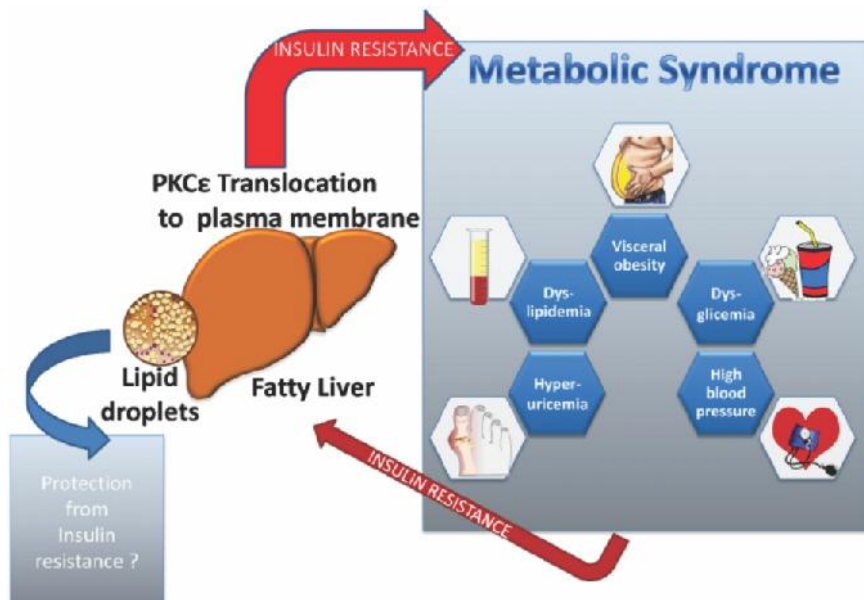

DRUGS

LIFE
STYLE
MODIFICATION

MONITORING

Black pigmentation at the back of neck suggestive of high risk for diabetes

Waistline more than 90 cms. (M) & 80 cms. (F)

RISK FACTORS FOR DIABETES

1. Family history of diabetes
2. Over weight
3. Age over 35
4. Sedentary job
5. Waist more than 80 cms. (F) / 90 cms. (M)
6. H/O diabetes during pregnancy
7. Under/over weight at birth.

The more the number of "yes" the higher the risk of developing diabetes.

THYROID

Thyroid diseases are very common especially in women. These are

1. HYPOTHYROIDISM

DO YOU HAVE

- Swelling of body
- Weight Gain
- Lethargy
- Weakness
- Cold Intolerance
- Excessive Hair Fall
- Poor Memory
- Low Sexual Desire

Puffy Eyes

- Joint / Body Pain
- Menstrual Irregularity
- Dry Skin
- Chronic Constipation
- Depression

2. HYPERTHYROIDISM

DO YOU HAVE

- Weight Loss
- Marked Weakness
- Heat Intolerance
- Prominent Eyes
- Excessive Sweating
- Nervousness
- Tremors of Hands/ Body
- Palpitation

Bulging Eyes

If you are having any two of the above, you may be suffering from **Hyperthyroidism**

3. Goitre

Enlargement of Thyroid Gland is called Goitre.

It may also be due to Cancer, or other disease of Thyroid.

OBESITY

Obesity is the mother of all disease.

It is a preventable and treatable condition.

The complications of obesity are as follows :

1. Diabetes
2. Heart Attack
3. Blood Pressure
4. Depression
5. Arthritis
6. Breathlessness
7. Gall Stones
8. Cancer
9. Impotence / Infertility
10. More prone to Accidents

2. Para-thyroid disorders

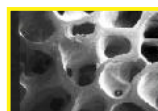

It relates to calcium diseases : High/Low calcium (tetany), kidney stone, osteoporosis etc.

Para-thyroid Glands

OSTEOPOROSIS OTHER HORMONE DISEASES

Normal Bone

Osteoporotic Bone

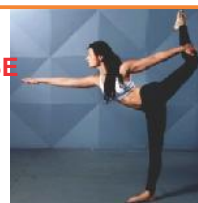

1. Disorder of Puberty
2. Short Height
3. Acromegaly

LIFE STYLE MODIFICATION (LS)

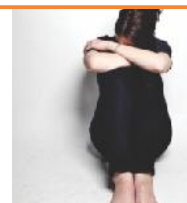

1. EXERCISE

- * Morning & Evening
- * 30 Min. Each

2. REDUCE STRESS

- * Meditation
- * Yoga
- * Music
- * Sound Clip
- * Love/Affection
- * Pets

3. DIET FOR DIABETES :

There is no such term as a "diabetic diet". It is a normal traditional healthy diet as for any person. All diabetics, are encouraged to eat a healthy, tasty, well-balanced diet that provides all the essential in appropriate amounts. The only difference is that **total calories should be divided into 6 equal parts** as shown below. One "Diabetic diet" does not fit all, hence learn to prepare your own diet chart. Eat food in as natural form as possible. Diet should be as per patient's taste and culture. Diet should provide i) adequate calories ii) micronutrients iii) pleasure of eating. You must enjoy your food. Learn to divide calories. Use minimum oil and sugar.

Diabetic Diet Chart

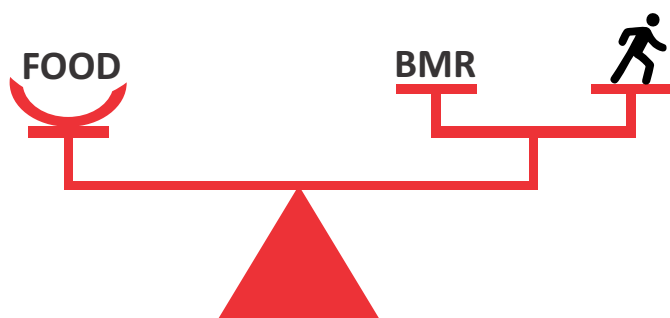

There is no 'ideal' percentage of carbohydrate, protein, fat-that apply to all persons with diabetes. Total carbohydrate intake takes precedence over the type of carbohydrate-(sugar, starch, low-to high glycemic index).

60% calories should come from carbohydrates, 20% from proteins and 20% from fats. 10% of calories can be from sucrose i.e. sugar.

- * **Vegetables** : All vegetables can be taken including potatoes, carrots but in small parts. Leafy vegetables can be taken in big helpings. High fibre foods are very good for health.
- * **Fruits** : All seasonal fruits must be taken and in the same amount, but in 3-5 parts in day as "mixed fruit chat".
- * **Sugar** : Sugar containing food are allowed, but should be limited to less than 10% of total calories, and only eaten in parts. Artificial sweeteners are, now, in disrepute, hence should be avoided.
- * **Salt** : As less as possible.
- * **Alcohol** : If a diabetic chooses to use alcohol, daily intake of one drink per day is safe. Alcohol should be consumed with food and not without food. One alcohol containing beverage is defined as 360 ml beer, 150 ml wine, or 45 ml distilled spirits each contains 15g. alcohol.

AVOID "FAST AND FEAST"

- * **Stop Smoking**
- * **Weight Reduction** : Overweight & Obese patients should reduce calories in their diet and increase burning of calories by regular exercise.

BMI Calculation (Body Mass Index) : Weight in Kgs divided by square of Height in Meters eg. If some one's weight is 100 kg and height is 2 meter (200 cm) his BMI is : (100 divided by 4) =25.

HYPOGLYCAEMIA (LOW SUGAR)

Hypoglycaemia is a real emergency. When the blood glucose level falls below a critical level (<70 mg%, usually 50-60 mg%) then following symptoms may appear.

- * **Palpitation** * **Tremors** * **Sweating** * **Hunger** * **Weakness**
- * **Restlessness** * **Headache** * **Confusion** exc.
- * **In severe cases, loss of consciousness and even fits may occur.**

Learn to recognize these symptoms at the earliest and try to check blood sugar level with glucometer if possible. Even if you can't check blood sugar and above complaints are present, **presume it to be "low sugar"**. Since time is precious during hypoglycaemia, don't waste time by ringing up someone for help. but

1. **Treat yourself by eating sweet/sugar immediately.**
2. **When the above symptoms disappear, then try to find out the cause for "Low Sugar", which occurs either due to delayed meals or excess drugs/exercise.**
3. **If you can't find the cause, miss the next dose and then reduce the diabetes-drug by 50%.**
4. **Then consult the doctor at earliest in OPD.**

Take "Hypoglycaemia" very seriously and learn to treat it and avoid it in future. Please remember, **as blood sugar control reaches towards normal, chances of "Hypoglycaemia" increase.** This can also be prevented by frequent monitoring of blood glucose and basic knowledge of "Blood sugar control".

If "Low-sugar-like symptoms" still persist, suspect heart problem and take immediate action.

**EVERY DAY MAY
NOT BE GOOD...
BUT THERE IS
SOMETHING
GOOD IN EVERY DAY**
